       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 Title:
Perfect score:
 OM protein -
 Total number of hits satisfying chosen parameters:
 Searched:
 Scoring table:
 Sequence:
 on:
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The cc polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques ct or restore normal activity of (II) or to treat disease states involving cc (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and canno acid sequences. ABGOOLOI-ABG30377 represent novel human cc diagnostic anino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed as pecification, but was obtained in electronic format directly from WIPO at the print of the print

 Human; TATA-binding RNA polymerase II; lambda-gtll; expres
 by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, E, F, H, I and J to RNA polymerase II holoenzyme. Fraction TFIID has been shown to contains a TBP and other TARs. Purification of TFIID and separation of its components reveals 7 proteins ranging in size from 30-250 kD. Serum raised against the TFIID fraction allowed cloning of the corresponens from lambda-gtil expression libraries.
 This is the amino acid sequence of the human TATA-binding protein (TBP) associated factor (TAF) designated TAFTII10. The protein is a componen of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated mol wt. of 130 kD by SDS-PAGE.

 The invention describes a method of screening a candidate antifungal CC compound for interaction with essential proteins (EP) or for modulation of EP activity e.g fungal gene transcription. The proteins tested in the CC invention include RPC34, POP3, TFA2, NAB2, MPT1, MTR2, BOS1, POL30, RSA2, CC SCT1, MTW1, TFB1, SPC98, BFR2, RNA1, GCD7, SK16, NIP1, LCP5, NCE103, CC ECO1, ORC2, CNS1, YPD1, TIM10 and SRA4 from S. cerevislae, C. albicans CC and human homologues. The method involves contacting a culture with one CC viability of the culture of cells which preferably comprises fungal cells or yeast cells. Preferably the identified compounds interact with, or CC modulate (preferably inhibit) activity of C. albicans EP. The inhibitor CC compounds identified by the method are useful for preventing or CC inhibiting fungal agents interact with essential fungal elements CC that can be used to treat fungal infection by preventing the growth and CC preferentially Killing the fungal, but does not inhibit the biological CC cativity of mammalian homologues. This amino acid sequence represents a cc method of the invention.

 88888888888888888888
 (TBP) associated factor (TAF) designated TAFIII10. The protein is a Component of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein that an estimated mol. wt. of 110 kD by SDS-PAGE, a calculated mol. wt. component of the gene of 99.4 kD and an estimated pI of 10.1. The invention relates to purified proteins involved in transcription by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, F, H, I and J to RNA polymerase II holoenzyme. Fraction TFIID has been shown to contains a TBP and other TAFs. Purification of TFID and separation of its components reveals 7 proteins ranging in size from 30-250 kD. Serum raised against the TFIID fraction allowed cloning of the corresp.

 AAW25028 represents TATA-binding protein associated factor (TAF) polypeptide, dTAFIII10 (mol. weight 110kD). TAF peptides derived from dTAFII30 alpha, dTAFII30 beta, dTAFII40, dTAFII60, dTAFII60, dTAFII60, dTAFII10, dTAFII10, dTAFII10, dTAFII10, dTAFII10, dTAFII10, dTAFII10, dTAFII10, are used to modulate transcription, including transcription initiation. TAFS are nuclear proteins involved in RNA polymerase I, II and III transcription. The peptides act by binding to a different TAF, an activator, or TBP (TATA-binding protein) or competitively inhibiting association of a TAF domain with another compound, typically a protein like TBP or another TAF, an activator,

 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL101840-ABL16175) and the encoded proteins sequences (ABL101840-ABL16175) and the encoded proteins
 The sequence data for this patent did not form specification, but was obtained in electronic at ftp.wipo.int/pub/published_pct_sequences.

 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLG1675) and the encoded proteins
 The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

 HCF is required for the transcription of a number of viral genes, such as the immediate early herpes simplex virus-1 genes. Epitopes of the encoded protein can be used in defining functional domains of HCF, identifying compounds that associate with HCF or designing compounds capable of modifying HCF transcription. Such agents can be used to treat viral infections.

 complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. Anti-(I) antibodies and antagonists may also be used to down regulate TCAP expression and activity. The anti-(I) antibodies may also be used
 The present invention describes colon tumour associated proteins (I) and the polynucleotides (II) that encode them. (I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with happropriate colon tumour associated protein (TCAP) expression, such as colonic cancer. For example, (I) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host cell culturing the cell to express the protein. (II) and its

 Scoring table:
 Title:
Perfect score:
 Run on:
 OM protein -
 Post-processing:
 Maximum
 Total number of hits satisfying chosen parameters:
 Sequence:
 8
 Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being and is derived by analysis of the total score distribution.

 8
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,
 Score
 is derived by analysis of the total score distribution.

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Tanese N., Saluja D., Vassallo M.F., Chen J.-L., Admon A.;

Tanese N., Saluja D., Vassallo M.F., Chen J.-L., Admon A.;

"Nolecular cloning and analysis of two subunits of the human TFIID complex: hTAFTI130 and hTAFII130.";

Proc. Natl. Acad. Sci. U.S.A. 93:13611-13616(1996).

-1- FUNCTION: MAKES PART OF TFIID IS A MULTIMERIC PROTEIN COMPLEX THAT PLAYS A CENTRAL ROLE IN MEDIATING PROMOTER RESPONSES TO VARIOUS ACTIVATORS AND REPRESSORS. POTENTIATES TRANSCRIPTIONAL ACTIVATION BY THE AF-2S OF THE RETINOIC ACID, VITAMIN D3 AND THYROID HORMONE.

-1- SUBUNIT: TFIID IS COMPOSED OF TATA BINDING PROTEIN (TBP) AND A NUMBER OF TBP-ASSOCIATED FACTORS (TAFS).

-1- SUBCELLULAR LOCATION: Nuclear.

-1- SUBCELLULAR LOCATION: Nuclear.

There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entitles requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
 J. CIII. INVEST. 88:1005-1013(1991).

J. CIII. INVEST. 88:1005-1013(1991).

-I- FUNCTION: COATS THE EPITHELIA OF THE INTESTINES, AIRWAYS, AND OTHER MUCUS MEMBRANE-CONTAINING ORGANS. THOUGHT TO PROVIDE A PROTECTIVE, LUBRICATING BARRIER AGAINST PARTICLES AND INFECTIOUS AGENTS AT MUCOSAL SURFACES.

-I- SUBUNIT: MULTIMERIC.
-I- SUBCHLULAR LOCATION: SECIETED.
-I- SUBCELLULAR LOCATION: SECIETED.
-I- TISSUE SPECIFICITY: COLON, SMALL INTESTINE, COLONIC TUMORS, BRONCHUS, CERVIX AND GALL BLADDER.
-I- PIN: ALL CYSTEINE RESIDUES ARE INVILARITY).
-I- POLYMORPHISM: THE NUMBER OF REPEATS IS HIGHLY POLYMORPHIC AND VARIES AMONG DIFFERENT ALLELES.

 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or
 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity

 TFIID and are thought to mediate transcriptional activation. This encoded protein may be produced recombinantly from transformed host cells or purified from human cells. hTARFIIIO5 specific binding agents such as specific antibodies could be used for diagnosis (e.g. genetic hybridisation screens for hTAFIIIO5 transcripts), therapy (e.g. gene therapy to modulate hTAFIIIO5 gene expression) and in the biopharmaceutical industry (e.g. as immunogens, reagents for isolating B cell specific activators or other transcriptional regulators).

 a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
 Polypeptide encoding TATA box binding protein associated factor II 105 useful for treating e.g. cancers and inducing apoptosis has a dominant negative effect on the normal biological activity of the binding

 pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as

 Yeung Liu C,
 The invention relates to novel foetal polypeptides encoded by polynucleotides comprising one of 477 sequences fully defined in the specification. The foetal polynucleotides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present
 sequence is a polypeptide encoded by a cDNA

 The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical.

CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC diagnostic amino acid sequences of the invention.
